

# Spraying

KEE Technologies were the first manufacturers to incorporate spraying and guidance applications into the one console and they continue to lead their competitors with a product that offers a dedicated spray rate controller that can replace current controllers with a simple plug and play installation.

***Auto Section Control (ASC) is supplied as a standard feature reducing the operators work load and increasing accuracy of spray application***

When using the Zynx as an integrated spray rate controller and guidance system, Auto Section Control (ASC) is supplied as a standard feature reducing the operators work load and increasing accuracy of spray application, thus reducing chemical costs. Auto section control of the farm spraying operation has been heralded as one of the most significant improvements on farm since the introduction of guidance.

As another field proven product from KEE Technologies the Zynx spray rate controller has dominated the market by offering a true stand alone controller that is simple to use and versatile to fit nearly all applications required.

Multiple tanks, dual lines, ASC, visual display of all functions, verbal and visual warnings on all alarming features, touch screen inputs, customise to suit controller performance and many other features, proving the Zynx is the most capable product on the market.

The advantages of a single console to do all the functions required from a modern spraying unit has obvious benefits reducing cabin clutter and offering an integrated system that does not have compatibility problems as often happens with multiple controllers

Upgrade your Zynx spray rate/guidance system at any time with a KEE Technologies Auto Steer kit and own one of the most capable steering systems on the market; again one console does the lot.

As an option on new sprayer or an upgrade on your existing sprayer the Zynx makes sense.
