

Variable Rate Control

Complementing the complete range of controller options available with the ZYNX multi task controller is the outstanding Maplink program. Import prescription maps, build your own maps or simply log product applications.

Capable of handling numerous file formats the Zynx VRC is possibly the most versatile product on the market, controlling seeding, spraying and spreading applications all with individual bin/tank inputs.

Zynx VRC is possibly the most versatile product on the market

Again tackle the highfiend of precision farming practises with one console that can create, control and log as well as steer and shut on and off your specific piece of machinery. Building prescription maps is as easy as driving around the field and then around the areas requiring a different input and create a template take this template add colours and rates and the jobs done.

Another valued feature is the ability to lock your operator out of the program so that you can be assured that the rates set before application are the same rates applied.

To add to any Zynx controller just register the maplink program and plug in a GPS receiver.

Variable Rate Control

The screenshot shows the ZMX SOLUTIONS VRC Screen interface. At the top, it displays 'Layer 1: Target: 10.0 Actual: 10.0'. Below this is a 'Layer 1 of 4' section with 'Bin Bin 1' and 'WHEAT'. A 'VRC is ON' indicator is present. A 'RATES' legend on the left lists various rate ranges from 0.0-25.0 to 225.0-250.0. The central 'PRESCRIPTION MAP' shows a field with different colored zones. On the right, there are buttons for 'MAPLINK', 'OPTIONS', 'HELP', and 'QUICK MAP'. At the bottom, there are buttons for 'NEXT LAYER', 'VRC', 'LOG', 'VIEW IN +', 'VIEW OUT -', 'VIEW ALL =', 'BACK', and 'TREATMENT IS ON'. A 'Swath 12M NOT SAVING' indicator is also visible. A 'LOGGING' indicator is shown on the left side of the interface.

Callouts in red boxes point to the following features:

- MAP DATA
- PRESCRIPTION MAP
- LOGGING
- RATES
- APPLICATION DISPLAY
- VARIABLE RATE
- LOGGING
- APPLICATION STATUS

- Add a GPS source and unlock the world of full Variable rate control
- Link VRC to controller for complete prescription farming
- Live application and logging maps
- Auto steer and variable rate control in one console
- Create your own maps or import Shape, PAM VRC files Case IH, JD SST Bitmaps GDX and more
- Change rates on the run or lock operator out
- Build your own maps with the onboard quick map program
- Easy to use simple to operate
